

# Chapter 1

Introduction: Some Representative Problems

Slides by Kevin Wayne. Copyright © 2005 Pearson-Addison Wesley. All rights reserved.

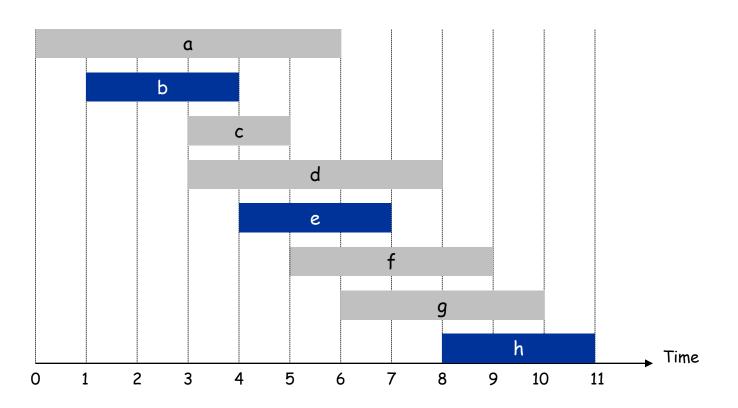

# 1.2 Five Representative Problems

# Interval Scheduling

Input. Set of jobs with start times and finish times.

Goal. Find maximum cardinality subset of mutually compatible jobs.

jobs don't overlap

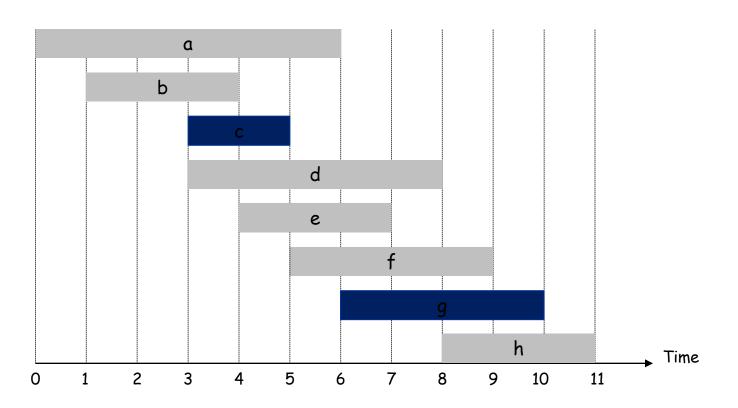

# Interval Scheduling

Input. Set of jobs with start times and finish times.

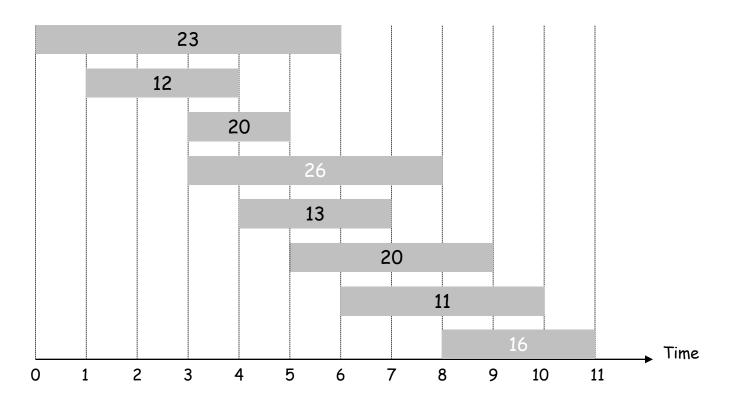

Goal. Find maximum cardinality subset of mutually compatible jobs.

jobs don't overlap

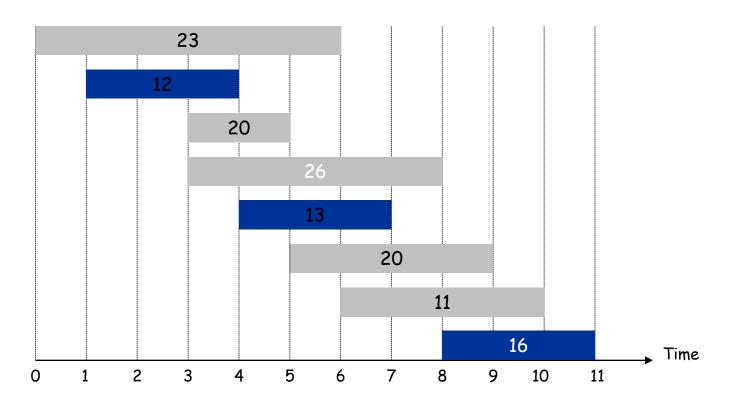

## Weighted Interval Scheduling

Input. Set of jobs with start times, finish times, and weights. Goal. Find maximum weight subset of mutually compatible jobs.

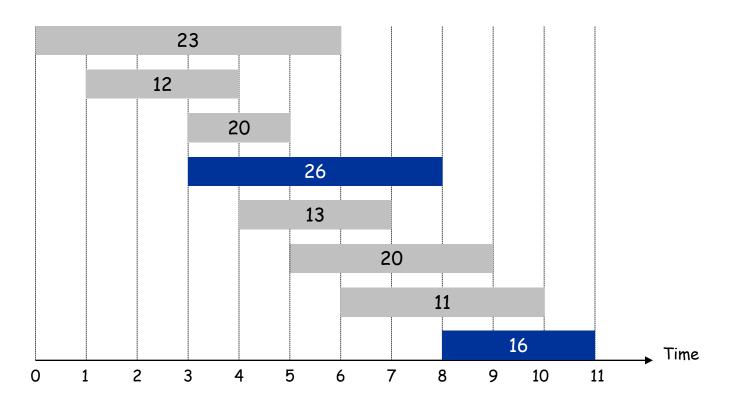

## Weighted Interval Scheduling

Input. Set of jobs with start times, finish times, and weights. Goal. Find maximum weight subset of mutually compatible jobs.

## Weighted Interval Scheduling

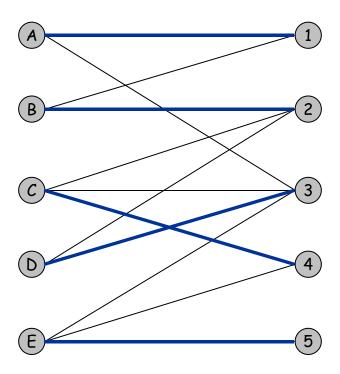

Input. Set of jobs with start times, finish times, and weights. Goal. Find maximum weight subset of mutually compatible jobs.

# Bipartite Matching

Input. Bipartite graph.

Goal. Find maximum cardinality matching.

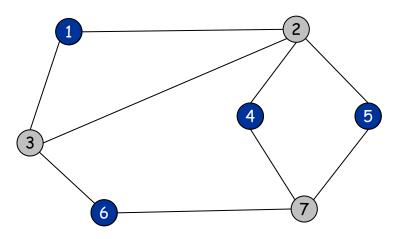

# Independent Set

Input. Graph.

Goal. Find maximum cardinality independent set.

subset of nodes such that no two joined by an edge

### Competitive Facility Location

Input. Graph with weight on each node.

Game. Two competing players alternate in selecting nodes.

Not allowed to select a node if any of its neighbors have been selected.

Goal. Select a maximum weight subset of nodes.

Second player can guarantee 20, but not 25.

### Five Representative Problems

covered in this course

Interval scheduling: n log n greedy algorithm.

Weighted interval scheduling: n log n dynamic programming algorithm.

Bipartite matching: nk max-flow based algorithm.

Independent set: NP-complete.

Competitive facility location: PSPACE-complete.

#### Lessons Learned

#### Powerful ideas learned in course.

- Isolate underlying structure of problem.
- Create useful and efficient algorithms.

#### Potentially deep social ramifications. [legal disclaimer]

- Historically, men propose to women. Why not vice versa?
- Men: propose early and often.
- Men: be more honest.
- Women: ask out the guys.
- Theory can be socially enriching and fun!
- CS majors get the best partners!
